Riafy/2021-22/NodeJS-Challenge/Jun/06-06

Objective

The Node.js Challenge assesses your ability to create APIs with JSON responses, databases, and functions for the backend logic, and host an application.

Prerequisites for the Challenge

Make sure you have the following when you start the test.

1. PC/Mac running Windows, Linux, or macOS
2. A GitHub account (or GitLab, Bitbucket, or any other known repository)
3. NodeJS 10 or greater
4. MySQL installed
5. Git installed

The Challenge

Time - **2 hours**

Create a Search API and a Drop-Down API to search for 30 stocks listed on the National Stock Exchange (NSE) using the company name or their symbol to view the key market ratios of a business. The APIs must contain token authorization restricted by a Login API.

Functionality

1. Create a **Search API** to search for 30 NSE stocks (3rd point).
2. Create a **Drop-Down API**. If a stock name is typed in, possible search suggestions must be shown as a drop-down.
3. The SQL/NoSQL database must contain 30 companies and their market ratios. The name of the stock/the name of the company is to be passed as a URL parameter while making API requests. The data to be shown in the JSON are in the [NSE Stocks CSV file >](#)

4. You can refer to the attached video to create the user interface. This is not mandatory, but having a user interface is always an advantage during the evaluation.

[NSE Stock Search UI >](#)

5. Use the brand guidelines below for building the UI easily. ❓❓

Some Instructions

- Use **Node.js for the backend**. Mention the framework used as a comment in the code.
- Create APIs with JSON responses. The data must be stored in a **MySQL/PostgreSQL/NoSQL** database and fetched on API calls by a Node.js script.
- **Test the APIs** well to make sure they are working well.

Submission

Time - 1.5 hours

Once done send a video recording of the working demo you have build. Host the code in github repository and share as email. Towards the end of your challenge, a Google Meet call with one of our evaluators will be scheduled prior to screen sharing your results. Make sure to submit the code anyway.

NB: **Hosted submissions will be given primary preference during evaluation** over those who screen share. If you can host the solution on web using free hosting services like heroku that will be given preference.

2. Share your work via jobs@riafy.me before or precisely at the end of your allowed time i.e., **3.5 hours**.
